

THISURIKA HASAJITH

Information Technology Specialising in Data Science Undergraduate

donthisurika@gmail.com | 078-3720275 | Colombo, Sri Lanka | [Linkdin](#) | [Github](#) | [Portfolio](#)

PROFILE

I am a Data Science and AI student passionate about transforming raw data into actionable insights and intelligent solutions. My curiosity drives me to explore the intersection of Machine Learning, Deep Learning, and real-world problem solving. With a strong foundation in Python, statistical modeling, and data visualization, I enjoy tackling complex analytical challenges and thrive in collaborative environments where I can combine technical skills with clear communication to deliver impactful results.

EDUCATION

BSc (Hons) in Data Science

Jan 2024 – Present

SLIIT

Malabe

- Focusing on Data Structures, Algorithms, Database Systems, Software Engineering, AI and Machine Learning.

TECHNICAL SKILLS

- Languages: Java, JavaScript, Python, SQL
- Frontend: React.js, React Native, Tailwind, HTML5, CSS3
- Backend: Node.js, Express.js, Spring Boot
- Databases: MongoDB, MySQL
- AI/ML: TensorFlow, Keras, OpenCV, MobileNetV2, CNN
- Tools: Git, GitHub, VS Code, Expo, Postman
- Concepts: REST APIs, Authentication, Computer Vision, Machine Learning, Responsive UI Design, Agile Development

PROJECTS SHOWCASE

Kuppiya Learning Platform with AI | React.js, Node.js, Express.js, MongoDB, Clerk [GitHub](#) 2026

- Developed a full-stack collaborative learning platform with AI that enables students to share coding problems, solve challenges, and exchange knowledge in a community-driven environment.
- Built an integrated online code execution feature, allowing users to write, test, and validate solutions directly within the platform.
- Implemented secure authentication and user management using Clerk with role-based access control.
- Designed a document library where users can upload, discover, and share study materials.
- Integrated AI-powered assistance to summarize learning resources and help users better understand technical concepts.
- Developed features for live learning sessions, enabling students to collaborate and receive guidance from peers.
- Built responsive user interfaces and RESTful APIs following scalable MERN architecture.

Smart Agro System | React.js, Node.js, Express.js, MongoDB, TensorFlow, Gemini API [GitHub](#) 2026

- Developed an AI-powered smart agriculture platform to support data-driven farming decisions using the MERN stack.
- Integrated real-time weather APIs to provide weather forecasts for effective agricultural planning.
- Developed an AI-powered plant disease detection system using deep learning and computer vision to identify crop diseases from uploaded leaf images.

- Integrated a Gemini API-powered agricultural chatbot that enables farmers to ask questions about plant diseases, symptoms, treatments, fertilizers, and crop management, providing real-time AI-assisted guidance.
- Designed modules for crop management, fertilizer recommendations, chemical inventory management, and farmer feedback.
- Developed scalable RESTful APIs and designed a MongoDB database architecture for efficient data

Food Delivery Mobile Application | React Native, Node.js [GitHub](#) 2026

- Developed a cross-platform food ordering application using React Native and Expo.
- Designed separate customer and administrator interfaces for product management and ordering.
- Implemented user authentication and secure order management functionality.
- Developed backend REST APIs using Express.js and MongoDB.
- Enabled real-time menu management and order processing.
- Optimized mobile UI for responsive performance across Android devices.

Land Management System | React.js, Spring Boot, MySQL [Github](#) 2025

- Developed a full-stack land management application using React.js and Spring Boot.
- Designed and implemented CRUD operations with MySQL database integration.
- Built responsive dashboards for efficient land information management.
- Developed a feedback management module to improve user engagement.
- Designed REST APIs for seamless communication between frontend and backend components.

Book Store Management System | Java [GitHub](#) 2024

- Developed a desktop-based bookstore management system following object-oriented programming principles.
- Implemented inventory, customer, and order management modules.
- Applied Merge Sort and Binary Search Tree data structures to optimize searching and sorting operations.
- Utilized Java file handling for persistent data storage.
- Improved system maintainability through modular software design.

CERTIFICATIONS

- Azure Fundamentals — Simplilearn (Certificate Code: 10434814)
- Data Analyst — Simplilearn (Certificate Code: 10380985)
- SQL for Data Science — Simplilearn (Certificate Code: 10365349)
- Machine Learning Using Python — Simplilearn (Certificate Code: 9857583)
- ChatGPT for Data Analytics — Simplilearn (Certificate Code: 9816533)
- Level Up on the Cloud: Building Your AWS Career — AWS Cloud Clubs & IEEE Computer Society, University of Jaffna (Certificate of Participation, February 2026)

LEADERSHIP & ACTIVITIES

- Committee Member, IEEE Student Branch of SLIIT (Design Team) – Lumara 2.0
- Member, IEEE Student Branch of SLIIT (Feb 2025 – Present)
- Member, Microsoft Student Club of SLIIT (Apr 2026 – Present)
- Committee Member, MiniHackathon 26
- Member, IEEE (Mar 2025 – Present)

LANGUAGES

- English
- Sinhala
